3.5 Bronchiectasis

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I cough up large amounts of phlegm every morning." **Objective** • Large amounts of purulent sputum • Coarse crackles • Clubbed fingers	**ACTUAL** **Ineffective airway clearance** related to excessive bronchial secretions as evidenced by copious sputum and coarse crackles.	Clears secretions effectively and can show you the airway clearance techniques.	• Teach postural drainage and the active cycle of breathing, as ordered. • Encourage fluids to thin the sputum. • Give nebulised saline or a mucolytic as prescribed. • Write down the amount, colour and smell of the sputum.	Less sputum, clearer breath sounds: **goal met**.
Subjective • "I feel weak and have lost weight." **Objective** • Lost 4 kg in 2 months • No appetite	**ACTUAL** **Imbalanced nutrition: less than body requirements** related to increased energy expenditure and poor appetite as evidenced by weight loss.	Weight holds steady within 2 weeks.	• Give mouth care before meals. • Offer small, frequent meals high in protein. • Refer to the dietitian. • Weigh once a week.	Weight steady: **goal met**.
Subjective • *No specific complaint* **Objective** • Secretions retained long term • Keeps getting infections	**RISK** **Risk for infection** as evidenced by risk factors: stasis of secretions and damaged airways.	Reports signs of infection early and stays out of hospital.	• Teach him to report fever, more sputum, or coughing blood. • Send sputum for culture as ordered. • Encourage vaccination.	Names the warning signs: **goal met**.
