3.7 Lung Cancer

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I get breathless and cough blood sometimes." **Objective** • SpO_2 90% • Coughing up blood • Less air entry on one side	**ACTUAL** **Impaired gas exchange** related to airway obstruction by tumour as evidenced by hypoxemia and dyspnea.	SpO_2 on the prescribed target and he says he is less breathless.	• Position him so the lungs can expand as much as possible. • Give oxygen as prescribed. • Keep track of how much blood he coughs up and report any increase. • Teach breathing control.	SpO_2 on target: **goal met**.
Subjective • "I worry about what will happen to my family." **Objective** • Tearful • Not sleeping	**ACTUAL** **Anxiety** related to diagnosis of cancer and uncertain future as evidenced by worry and insomnia.	Talks about his feelings and says he is less anxious.	• Give him time to talk. • Give accurate information about the treatment plan. • Bring in the family and psychological support.	Says he is less anxious: **goal met**.
Subjective • *No specific complaint* **Objective** • Tumour growing into blood vessels • May be on an anticoagulant	**RISK** **Risk for bleeding** as evidenced by risk factors: tumour erosion of blood vessels.	No massive hemoptysis; any bleeding is caught early.	• Watch and record any hemoptysis. • Follow the Hb. • Have suction ready at the bedside. • Report any increase in bleeding at once.	No major bleeding: **goal met**.
