4.1 Hypertension

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I stop my tablets when I feel well." • Gets a headache now and then **Objective** • BP 168/102 mmHg on two readings • BMI 31 kg/m² • Eats a lot of salt	**ACTUAL** **Ineffective health self-management** related to insufficient knowledge of disease and treatment as evidenced by stopping medication and uncontrolled BP.	Can explain why he needs treatment and takes his tablets every day; BP close to target within 4 weeks.	• Explain that high blood pressure usually causes no symptoms and that treatment is for the long term. • Teach him when to take his medicine and that he must not stop it without advice. • Teach cutting down on salt, losing weight and exercising regularly. • Show him how to check and record his BP at home. • Book follow-up.	Explains his treatment, BP coming down: **goal met**.
Subjective • "I do not know what foods have salt." **Objective** • Diet history: pickles, processed foods, salted bread • Adds salt at the table	**ACTUAL** **Deficient knowledge** related to dietary sodium as evidenced by high-salt diet and questions.	Before discharge, can pick out salty foods and plan a low-salt diet.	• Explain where hidden salt comes from. • Give a list of low-salt swaps. • Refer to the dietitian.	Plans a low-salt menu: **goal met**.
Subjective • *No specific complaint* **Objective** • BP not controlled • Smokes • Diabetic	**RISK** **Risk for ineffective cerebral tissue perfusion** as evidenced by risk factors: uncontrolled hypertension and smoking.	No neurological deficit; BP kept under control.	• Teach the warning signs of stroke and that they need urgent care. • Help him stop smoking. • Check BP at every visit.	Names the warning signs: **goal met**.
