4.14 Cardiac Catheterization and PCI

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "What will happen during the procedure?" **Objective** • Never had one before • Restless, full of questions	**ACTUAL** **Anxiety** related to invasive procedure as evidenced by questions and worry.	Says he understands the procedure and feels less anxious.	• Explain the procedure, what he will feel, and the aftercare. • Ask about allergy to contrast and iodine. • Before the procedure, check renal function and anticoagulant status. • Leave time for his questions.	Calm and informed: **goal met**.
Subjective • "My leg feels heavy and I want to bend it." **Objective** • Femoral puncture • On ordered bed rest	**ACTUAL** **Impaired physical mobility** related to bed rest after femoral access as evidenced by prescribed immobility.	Keeps the leg straight for the ordered time, with no complications.	• Keep the leg on the puncture side straight, as ordered. • Check the site, distal pulses, colour and warmth regularly.	Pulses normal, site dry: **goal met**.
Subjective • *No specific complaint* **Objective** • Arterial puncture • On antiplatelet and anticoagulant drugs	**RISK** **Risk for bleeding** as evidenced by risk factors: arterial puncture and antithrombotic drugs.	No hematoma or bleeding at the puncture site.	• Check the site each time you do vital signs, per protocol. • If it bleeds, press on it and report at once. • Look out for back pain or low BP (retroperitoneal bleed).	No bleeding: **goal met**.
