4.16 Peripheral Arterial Disease

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "My calf hurts when I walk and stops when I rest." **Objective** • Weak pedal pulses • Skin on the legs cool, shiny and hairless • Capillary refill slow	**ACTUAL** **Ineffective peripheral tissue perfusion** related to arterial narrowing as evidenced by claudication, weak pulses and skin changes.	Within 4 weeks, walks further before the pain starts.	• Check pulses, colour and temperature of the legs. • Encourage a graded walking programme. • Keep the legs down or level; do not raise them. • Help him stop smoking. • Give the antiplatelet and statin as prescribed.	Walking further: **goal met**.
Subjective • Leg pain 6/10 when walking **Objective** • Claudication comes on after 100 metres • Weak pedal pulses	**ACTUAL** **Chronic pain** related to ischemia as evidenced by claudication.	Says the pain during activity is manageable.	• Teach him to stop when the pain starts, then carry on walking. • Give analgesia as prescribed. • Encourage a supervised walking programme. • Help him stop smoking.	Pain manageable: **goal met**.
Subjective • *No specific complaint* **Objective** • Circulation poor • Diabetic	**RISK** **Risk for impaired skin integrity** as evidenced by risk factors: impaired circulation.	Skin on the feet stays intact.	• Teach him to inspect his feet every day. • Advise proper footwear. • No heating pads on the legs.	Skin intact: **goal met**.
