4.19 Abdominal Aortic Aneurysm

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I feel a pulsing in my abdomen." **Objective** • Pulsating mass in the abdomen • Aneurysm seen on ultrasound	**ACTUAL** **Deficient knowledge** related to diagnosis and planned surgery as evidenced by questions.	Can name the warning signs of rupture and describe his plan of care.	• Explain the condition and the surgical plan. • Tell him not to lift heavy things or strain. • Teach him to go to emergency straight away for sudden back or abdominal pain.	Names the warning signs: **goal met**.
Subjective • "I am afraid of the operation." **Objective** • Anxious • Slept badly before surgery	**ACTUAL** **Anxiety** related to major surgery as evidenced by expressed fear.	Says he feels less anxious.	• Tell him about the operation and what recovery will be like. • Encourage questions. • Bring the family into the pre-op teaching.	Calmer: **goal met**.
Subjective • *No specific complaint* **Objective** • Aneurysm • Hypertension	**RISK** **Risk for bleeding** as evidenced by risk factors: aneurysm rupture.	BP stays on target, and rupture is recognised early.	• Control BP as prescribed. • Watch for sudden pain, low BP and a fast heart rate. • Report straight away.	Condition stable: **goal met**.
