5.11 Spinal Cord Injury

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I cannot feel or move my legs." **Objective** • Paraplegia • No sensation below T10	**ACTUAL** **Impaired physical mobility** related to spinal cord injury as evidenced by inability to move lower limbs.	Spine kept aligned and the complications of immobility prevented.	• Keep the spine aligned and log-roll as ordered. • Do ROM exercises. • Turn every 2 hours. • Start rehabilitation.	No contractures or pressure injury: **goal met**.
Subjective • *No specific complaint* **Objective** • Cannot control his bladder • Bladder distended	**ACTUAL** **Impaired urinary elimination** related to neurogenic bladder as evidenced by urinary retention.	Bladder emptied regularly, with no infection.	• Intermittent catheterisation as ordered. • Record the output. • Start bladder training.	Emptying regularly: **goal met**.
Subjective • *No specific complaint* **Objective** • Immobile • No sensation	**RISK** **Risk for adult pressure injury** as evidenced by risk factors: immobility and sensory loss.	Skin stays intact.	• Look at the skin at least twice a day, the sacrum and heels especially. • Nurse him on a pressure-redistributing mattress. • Turn every 2 hours. • Teach him to lift himself to relieve pressure while in the wheelchair.	Skin intact: **goal met**.
