5.13 Guillain-Barré Syndrome

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "My legs became weak and now my arms too." **Objective** • Weakness spreading upwards • Vital capacity falling	**ACTUAL** **Ineffective breathing pattern** related to respiratory muscle weakness as evidenced by reduced vital capacity.	Ventilation adequate, and respiratory failure caught early.	• Measure vital capacity as ordered. • Watch SpO_2 and how well he can cough. • If vital capacity drops, prepare for ventilation. • Give immunoglobulin or plasmapheresis as ordered.	Breathing stable: **goal met**.
Subjective • *No specific complaint* **Objective** • Cannot walk • Leg muscle strength 2/5	**ACTUAL** **Impaired physical mobility** related to neuromuscular weakness as evidenced by inability to walk.	Joints stay mobile, no contractures.	• Passive ROM 3 times a day. • Change his position every 2 hours. • Refer to physiotherapy.	No contractures: **goal met**.
Subjective • *No specific complaint* **Objective** • Immobile • On bed rest	**RISK** **Risk for thrombosis** as evidenced by risk factors: immobility.	No DVT.	• Give prophylactic anticoagulant as ordered. • Put on compression devices. • Check the calves every day.	No DVT: **goal met**.
