5.16 Parkinson's Disease

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "My hands shake and I move slowly." **Objective** • Tremor • Moves slowly (bradykinesia) • Shuffles when he walks	**ACTUAL** **Impaired physical mobility** related to rigidity and bradykinesia as evidenced by slow movement and shuffling gait.	Stays mobile and manages ADL with aids.	• Give his medicines on time; any delay makes symptoms worse. • Encourage exercise and stretching. • Teach him to take big steps and lift his feet when walking.	Mobility kept: **goal met**.
Subjective • "I cough while eating." **Objective** • Drools • Swallows slowly	**ACTUAL** **Impaired swallowing** related to muscle rigidity as evidenced by drooling and coughing during meals.	Eats safely, without coughing or choking.	• Sit him up for meals and for 30 minutes after. • Offer small mouthfuls and do not rush him. • Refer to the speech therapist. • Give his medicines on time before meals.	Eating safely: **goal met**.
Subjective • *No specific complaint* **Objective** • Balance poor • Shuffles	**RISK** **Risk for adult falls** as evidenced by risk factors: shuffling gait and postural instability.	No falls.	• Fall precautions in place. • Teach him to get up slowly and to turn in a wide arc. • Get rid of rugs and clutter.	No falls: **goal met**.
