5.2 Transient Ischemic Attack

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "My arm was numb for 20 minutes, then it went away." **Objective** • Neurological exam normal now • BP 158/94 mmHg • Smokes	**ACTUAL** **Deficient knowledge** related to significance of TIA as evidenced by statement that symptoms are gone.	Before discharge, can explain that a TIA warns of a stroke and can list his risk factors.	• Explain that a TIA is a warning sign. • Teach the warning signs of stroke and that they need emergency care. • Stress taking his medicines every day (antiplatelet, statin, antihypertensive). • Book follow-up.	Explains what a TIA means: **goal met**.
Subjective • "I smoke and eat salty food." **Objective** • Hypertensive • High lipids	**ACTUAL** **Ineffective health self-management** related to unhealthy lifestyle as evidenced by smoking and uncontrolled risk factors.	Commits to two changes in his lifestyle.	• Help him stop smoking. • Teach a diet low in salt and fat. • Encourage regular exercise.	Describes his plan: **goal met**.
Subjective • *No specific complaint* **Objective** • TIA recently • Hypertensive	**RISK** **Risk for ineffective cerebral tissue perfusion** as evidenced by risk factors: recent TIA and hypertension.	No stroke.	• Check BP. • Give the antiplatelet as prescribed. • Check neurological status.	No neurological deficit: **goal met**.
