5.7 Epilepsy

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I forget to take my tablets." **Objective** • Having more seizures • Drug level low	**ACTUAL** **Ineffective health self-management** related to irregular use of antiepileptic drugs as evidenced by missed doses and increased seizures.	Takes his medicine every day and has fewer seizures.	• Explain why regular doses matter. • Suggest reminders and a pill organiser. • Teach the triggers: lack of sleep, alcohol, missed doses. • Tell him never to stop his drugs suddenly.	Fewer seizures: **goal met**.
Subjective • "People are afraid of me." **Objective** • Withdrawn • Stays away from school or work	**ACTUAL** **Social isolation** related to stigma of seizures as evidenced by withdrawal.	Names people who support him and gets back to one social activity.	• Encourage him to talk about how he feels. • Teach the family about epilepsy and seizure first aid. • Refer to an epilepsy support group.	Names his supports: **goal met**.
Subjective • *No specific complaint* **Objective** • Seizure disorder • Two seizures this month	**RISK** **Risk for injury** as evidenced by risk factors: seizures.	Patient and family can describe seizure first aid.	• Teach the family: protect his head, put nothing in his mouth, roll him on his side when the jerking stops, time the seizure. • He should not swim alone, and should not drive until he is allowed to.	Family describe first aid: **goal met**.
