6.13 Colorectal Cancer

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I have lost weight and do not feel like eating." **Objective** • Lost 6 kg in 3 months • Hb 9.5 g/dL • Albumin low	**ACTUAL** **Imbalanced nutrition: less than body requirements** related to disease process and reduced intake as evidenced by weight loss and low albumin.	Weight holds or goes up before surgery or treatment.	• Screen her nutrition on admission. • Refer to the dietitian for supplements. • Offer small meals often, high in protein. • Weigh twice a week. • Give iron or blood for the anemia as prescribed.	Weight steady or rising: **goal met**.
Subjective • "I am frightened of having a bag." • "Will the cancer come back?" **Objective** • Tearful • Sleeping badly	**ACTUAL** **Anxiety** related to cancer diagnosis and possible stoma as evidenced by expressed fear and insomnia.	Before surgery, shares her worries and says she is less anxious.	• Give her time for questions, and listen. • Before surgery, arrange for the stoma nurse to visit and mark the stoma site. • Give clear information together with the medical team. • Bring in the family as she wishes.	Says she feels better prepared: **goal met**.
Subjective • *No specific complaint* **Objective** • Bowel resection planned • Anemic • Albumin low	**RISK** **Risk for surgical site infection** as evidenced by risk factors: bowel surgery, anemia and poor nutrition.	Wound heals without infection and there are no signs of an anastomotic leak.	• Give the prophylactic antibiotic as ordered. • Watch the wound, the drain output and the temperature. • Report fever, worsening abdominal pain or a fast heart rate (may be a leak).	No infection: **goal met**.
