6.16 Cholecystitis and Cholecystectomy

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "Severe pain under my right ribs after a fatty meal." • The pain goes through to her right shoulder **Objective** • Tender in the right upper quadrant • Murphy sign positive • Temperature 38.1 °C	**ACTUAL** **Acute pain** related to gallbladder inflammation and obstruction as evidenced by right upper quadrant pain and positive Murphy sign.	Pain 3/10 or less within 2 hours of treatment.	• Give analgesia and an antispasmodic as prescribed. • During the acute attack, nothing by mouth as ordered. • Give IV antibiotics if prescribed. • Get her ready for surgery. • Watch for jaundice, dark urine and pale stools.	Pain controlled: **goal met**.
Subjective • "What can I eat now?" • "Why does my shoulder hurt?" **Objective** • Had a laparoscopic cholecystectomy • Cannot say what she should eat	**ACTUAL** **Deficient knowledge** related to post-operative care and diet as evidenced by questions.	Before discharge, can repeat the diet advice and the warning signs.	• Explain that pain at the shoulder tip comes from the gas used in laparoscopy and settles as she walks about. • She can go back to a normal diet, cutting down fatty food at first if it upsets her. • Teach wound care. • Tell her to report jaundice, fever or worsening pain.	Repeats the advice: **goal met**.
Subjective • *No specific complaint* **Objective** • Surgical wounds • Inflamed gallbladder taken out	**RISK** **Risk for surgical site infection** as evidenced by risk factors: surgical incisions and infected gallbladder.	Wounds heal without infection.	• Watch the wounds and her temperature. • Keep the dressings dry and intact.	No infection: **goal met**.
