6.23 Bariatric Surgery

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I feel full after a few spoons." • "What can I eat now?" **Objective** • Has had a sleeve gastrectomy or bypass • Cannot describe the diet stages	**ACTUAL** **Deficient knowledge** related to post-operative diet stages as evidenced by questions.	Before discharge, can describe how her diet will progress.	• Teach the diet in stages: clear fluids, then puree, then soft, then normal, as advised. • Teach small portions, eating slowly and stopping when full. • Drinks go between meals, not with them. • Explain she will need vitamin and mineral supplements for life.	Describes the plan correctly: **goal met**.
Subjective • Gives the pain 6/10 **Objective** • Laparoscopic wounds • Pain at the shoulder tip	**ACTUAL** **Acute pain** related to surgery as evidenced by pain score 6/10.	Pain 3/10 or less within 24 hours.	• Give analgesia as prescribed. • Get her moving early to ease the shoulder-tip pain. • Support the wounds when she coughs.	Pain controlled: **goal met**.
Subjective • *No specific complaint* **Objective** • BMI above 40 kg/m² • Had abdominal surgery	**RISK** **Risk for thrombosis** as evidenced by risk factors: obesity and surgery.	No DVT, no pulmonary embolism.	• Get her moving early. • Give the prophylactic anticoagulant as ordered. • Put on compression devices.	No DVT: **goal met**.
