6.7 Crohn's Disease

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I have cramps and diarrhea many times a day." **Objective** • 6 stools a day • Tender in the right lower quadrant	**ACTUAL** **Diarrhea** related to bowel inflammation as evidenced by frequent loose stools and cramps.	Within 1 week of treatment, fewer stools.	• Chart how often she opens her bowels. • Give anti-inflammatory and immunosuppressive drugs as prescribed. • Keep her hydrated. • Protect the skin around the anus.	Fewer stools: **goal met**.
Subjective • "I avoid eating to avoid pain." **Objective** • Lost 5 kg • Albumin low	**ACTUAL** **Imbalanced nutrition: less than body requirements** related to malabsorption and reduced intake as evidenced by weight loss.	Weight holds steady within 2 weeks.	• Refer to the dietitian. • Offer small meals high in calories. • Weigh once a week. • Give supplements as prescribed.	Weight steady: **goal met**.
Subjective • *No specific complaint* **Objective** • On immunosuppressants • On steroids	**RISK** **Risk for infection** as evidenced by risk factors: immunosuppression.	No infection.	• Teach her to report fever quickly. • Teach hand hygiene. • Check her vaccinations are up to date.	No infection: **goal met**.
