7.10 Kidney Transplant

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "How long will I take these medicines?" **Objective** • Started on immunosuppressants • Cannot name his drugs	**ACTUAL** **Deficient knowledge** related to lifelong immunosuppression as evidenced by questions.	Can name each drug, say when to take it and why it matters.	• Teach him never to miss or stop his immunosuppressants. • Explain why drug levels are checked. • Teach the signs of rejection: fever, pain over the graft, less urine, weight gain.	Explains his regimen: **goal met**.
Subjective • "Is it normal that my urine changes?" **Objective** • Urine output up and down • Creatinine being followed	**ACTUAL** **Impaired urinary elimination** related to new graft function as evidenced by variable urine output.	Urine output adequate and creatinine coming down.	• In the early period, record urine output every hour. • Give fluids as prescribed. • Report any sudden drop in output.	Output adequate: **goal met**.
Subjective • *No specific complaint* **Objective** • Immunosuppressed • Transplanted recently	**RISK** **Risk for infection** as evidenced by risk factors: immunosuppressive therapy.	No infection.	• Teach hand hygiene. • Keep away from people who are ill. • Teach him to report fever.	No infection: **goal met**.
