7.12 Bladder Cancer and Urinary Diversion

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I saw blood in my urine but felt no pain." • "Is it cancer?" **Objective** • Blood in the urine with no pain • Has smoked for 30 years • Waiting for the cystoscopy results	**ACTUAL** **Anxiety** related to possible cancer diagnosis and treatment as evidenced by worry and repeated questions.	Before treatment, shares his worries and says he is less anxious.	• Give him time to talk about his fears. • Give clear information together with the medical team. • Help him stop smoking. • Bring in the family as he wishes.	Says he feels informed and calmer: **goal met**.
Subjective • "How do I look after the urostomy?" **Objective** • New ileal conduit after cystectomy • Urine flows from the stoma all the time	**ACTUAL** **Deficient knowledge** related to urostomy care as evidenced by questions and inability to describe care.	Before discharge, changes the appliance and connects the night drainage bag himself.	• Teach him to measure the stoma and change the appliance. • Show him how to connect a night drainage bag. • Teach him to drink 2–2.5 L/day. • Explain that mucus in the urine is normal with an ileal conduit. • Tell him to report a dark stoma, fever or flank pain.	Shows you correctly: **goal met**.
Subjective • *No specific complaint* **Objective** • Urinary diversion • Ureteric stents in place	**RISK** **Risk for infection** as evidenced by risk factors: urinary diversion and stents.	No UTI.	• Aseptic technique with the stents and drainage. • Watch his temperature and how the urine looks. • Encourage fluids.	No infection: **goal met**.
