7.15 Nephrectomy

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "The wound in my side hurts a lot." • Gives the pain 8/10 **Objective** • Incision in the flank • Guarding • HR 104/min	**ACTUAL** **Acute pain** related to flank incision as evidenced by pain score 8/10 and guarding.	Pain 3/10 or less within 24 hours.	• Give analgesia regularly (epidural or PCA as ordered). • Make him comfortable with pillows for support. • Support the incision when he coughs.	Pain controlled: **goal met**.
Subjective • "It hurts to take a deep breath." **Objective** • Breathing shallow • Breath sounds reduced at the base on the operated side	**ACTUAL** **Ineffective breathing pattern** related to incision close to the diaphragm as evidenced by shallow breathing and reduced breath sounds.	Breath sounds clear within 48 hours.	• While awake, encourage deep breathing and the incentive spirometer every hour. • Get him moving early. • Listen to the lungs every 4 hours.	Breath sounds clear: **goal met**.
Subjective • *No specific complaint* **Objective** • A very vascular organ has been removed • Only one kidney left	**RISK** **Risk for bleeding** as evidenced by risk factors: surgery on a highly vascular organ.	Vital signs stable and urine output at least 0.5 mL/kg/hour.	• Follow vital signs, drain output and hourly urine output. • Follow Hb and creatinine. • Teach him to avoid drugs that harm the kidneys, such as NSAIDs, in future unless advised.	Stable: **goal met**.
