7.6 Chronic Kidney Disease

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "My legs swell and I gain weight easily." **Objective** • eGFR under 30 mL/min • Edema • BP 150/95 mmHg	**ACTUAL** **Excess fluid volume** related to impaired renal function as evidenced by edema, weight gain and hypertension.	Keeps his weight gain within the prescribed limits.	• Teach him to weigh himself every day. • Teach his fluid and sodium limits. • Give antihypertensives and diuretics as prescribed. • Follow electrolytes and creatinine.	Weight within limits: **goal met**.
Subjective • "I do not know which foods to avoid." **Objective** • Potassium and phosphate high • Eats dates and bananas every day	**ACTUAL** **Deficient knowledge** related to renal diet as evidenced by questions and abnormal potassium and phosphate.	Plans a renal diet with the dietitian.	• Teach which foods are high in potassium (bananas, dates, tomatoes) and in phosphate. • Teach him to take phosphate binders with meals. • Refer to the dietitian.	Plans his diet correctly: **goal met**.
Subjective • *No specific complaint* **Objective** • Anemia from CKD • Uremia	**RISK** **Risk for activity intolerance** as evidenced by risk factors: anemia and uremia.	Keeps up his daily activities.	• Follow the Hb. • Give erythropoietin and iron as prescribed. • Plan rest periods.	Activity kept up: **goal met**.
