8.2 Type 2 Diabetes Mellitus

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I eat rice and bread at every meal." • "I do not exercise." **Objective** • HbA1c 9% • BMI 33 kg/m² • Fasting glucose 190 mg/dL	**ACTUAL** **Ineffective health self-management** related to insufficient knowledge of diet and activity as evidenced by high HbA1c and unhealthy lifestyle.	Can describe a meal plan and an activity goal; HbA1c lower at the next review.	• Teach balanced meals, portion control and less refined carbohydrate. • As he can manage, aim for 150 minutes of moderate activity a week. • Teach him when to take his medicines. • Refer to the dietitian and the diabetes educator.	Describes his plan and glucose is improving: **goal met**.
Subjective • "I do not check my feet." **Objective** • Monofilament test shows reduced sensation • Calluses on both feet	**ACTUAL** **Deficient knowledge** related to foot care as evidenced by not inspecting feet and reduced sensation.	Shows you how he checks his feet each day.	• Teach him to look at his feet every day, using a mirror. • Teach washing, drying between the toes, and moisturising (but not between the toes). • Advise proper footwear and never going barefoot. • Book a foot review once a year.	Shows you: **goal met**.
Subjective • *No specific complaint* **Objective** • Hyperglycemia • Hypertensive • Smokes	**RISK** **Risk for ineffective peripheral tissue perfusion** as evidenced by risk factors: diabetes, hypertension and smoking.	Commits to reducing his risk.	• Follow BP and lipids. • Help him stop smoking. • Encourage him to take his medicines as prescribed.	Describes his plan: **goal met**.
