8.6 Diabetic Foot Ulcer

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I did not feel the wound until I saw blood on my sock." **Objective** • 2 × 2 cm ulcer on the sole • Sensation reduced • Weak pedal pulses	**ACTUAL** **Impaired tissue integrity** related to neuropathy and poor circulation as evidenced by ulcer on the sole.	Within 2 weeks the ulcer shows signs of healing.	• Measure the wound and record it every week. • Do wound care as prescribed. • Take the pressure off with special footwear or no weight-bearing, as ordered. • Keep blood glucose under control.	Wound smaller: **goal met**.
Subjective • "I cannot walk normally." **Objective** • Ordered non-weight-bearing • Wobbly on crutches	**ACTUAL** **Impaired walking** related to offloading requirement as evidenced by prescribed restriction.	Moves about safely with aids, without putting weight on the ulcer.	• Give him crutches, a walker or a wheelchair. • Teach him to use them safely. • Check whether he is at risk of falling at home.	Moving safely: **goal met**.
Subjective • *No specific complaint* **Objective** • Open wound • Glucose above target	**RISK** **Risk for infection** as evidenced by risk factors: open wound and hyperglycemia.	Infection does not spread.	• Watch for redness, swelling, smell and fever. • Send a wound swab as ordered. • Keep blood glucose under control.	No infection: **goal met**.
