9.12 Gout

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "My big toe is red, hot and very painful." **Objective** • First metatarsophalangeal joint swollen • Uric acid raised	**ACTUAL** **Acute pain** related to urate crystal inflammation as evidenced by severe joint pain and swelling.	Pain relieved within 24–48 hours.	• Rest the joint and raise it. • Give an anti-inflammatory or colchicine as prescribed. • Use a bed cradle to keep the sheets off the joint.	Pain relieved: **goal met**.
Subjective • "I eat a lot of red meat." **Objective** • Attacks keep coming back • Diet high in purines	**ACTUAL** **Deficient knowledge** related to prevention of attacks as evidenced by high-purine diet.	Can explain how to prevent attacks.	• Teach him to cut down red meat, organ meat and sugary drinks. • Encourage fluids. • Explain that urate-lowering therapy is long term.	Explains the measures: **goal met**.
Subjective • *No specific complaint* **Objective** • Uric acid high • Stops his medicine once the pain settles	**RISK** **Risk for ineffective health self-management** as evidenced by risk factors: long-term medication and diet changes.	Keeps taking urate-lowering therapy as prescribed.	• Explain why treatment is long term. • Book follow-up checks of uric acid. • Tell him not to stop his medicines during an attack.	Taking them as prescribed: **goal met**.
