9.7 Total Knee Replacement

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • Gives the pain 7/10 when bending the knee **Objective** • Knee swollen • Cannot bend the knee far	**ACTUAL** **Acute pain** related to surgery as evidenced by pain on movement.	Pain low enough to do her knee exercises (4/10 or less).	• Give analgesia regularly, especially before physiotherapy. • Cold therapy as ordered. • Raise the leg, but do not put a pillow under the knee.	Controlled: **goal met**.
Subjective • "It is hard to bend my knee." **Objective** • Knee bends to 60°	**ACTUAL** **Impaired physical mobility** related to pain and stiffness as evidenced by limited knee flexion.	Knee bends to 90° before discharge, or to the physiotherapist's target.	• Encourage knee exercises, and continuous passive motion if ordered. • Walk with an aid as instructed. • Record how far the knee bends every day.	Target reached: **goal met**.
Subjective • *No specific complaint* **Objective** • Joint prosthesis in place • Wound dressing on	**RISK** **Risk for surgical site infection** as evidenced by risk factors: joint prosthesis.	Wound heals without infection.	• Aseptic wound care. • Watch her temperature. • Tell her to report redness, swelling or discharge.	No infection: **goal met**.
