10.11 HIV Infection and AIDS*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I have diarrhea and lost a lot of weight." **Objective** • 10% weight loss • Oral candidiasis • Low CD4 count	**ACTUAL** Inadequate nutritional intake related to opportunistic infections and diarrhea as evidenced by weight loss and oral candidiasis.	• Weight steady within 2 weeks.	• Treat the oral candidiasis as prescribed. • Offer small, frequent high-protein meals. • Manage the diarrhea and keep him hydrated. • Refer to the dietitian.	• Met if weight is stable.
Subjective • "Must I take tablets every day for life?" **Objective** • Starting antiretroviral therapy • Cannot name his medicines	**ACTUAL** Inadequate health knowledge related to antiretroviral therapy as evidenced by questioning.	• Before discharge, explains why daily adherence is essential.	• Explain that missed doses can lead to drug resistance. • Set up a daily routine with reminders. • Explain how viral load and CD4 count are monitored. • Teach how to prevent transmission.	• Achieved when he describes the plan.
Subjective *No specific complaint* **Objective** • Low CD4 count	**RISK** Risk for infection as evidenced by risk factors: immunodeficiency.	• No opportunistic infection.	• Give prophylactic drugs as ordered. • Ask him to report fever, cough, headache or diarrhea. • Keep his care confidential and free of judgment.	• Outcome reached if no infection develops.
