16.6 Birth Asphyxia*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective *No specific complaint* **Objective** • Apgar 3 at 1 minute • Weak breathing effort	**ACTUAL** Impaired spontaneous ventilation related to hypoxic insult at birth as evidenced by poor respiratory effort.	• Effective spontaneous breathing established.	• Start neonatal resuscitation per protocol. • Follow HR and SpO_2. • Transfer to the neonatal unit for ongoing support.	• Achieved when the baby breathes on its own.
Subjective *No specific complaint* **Objective** • Seizures • Abnormal tone	**ACTUAL** Impaired infant neurodevelopmental organization related to hypoxic–ischemic brain injury as evidenced by seizures and abnormal muscle tone.	• Seizures controlled.	• Give anticonvulsants as prescribed. • Start therapeutic hypothermia per protocol if the baby is eligible. • Follow neurological status and blood glucose.	• Outcome reached when seizures are controlled.
Subjective *No specific complaint* **Objective** • Baby in the neonatal unit • Parents hesitant to touch the baby	**RISK** Risk for disrupted attachment behaviors as evidenced by risk factors: separation of parents and infant.	• Parents visit and share in care.	• Encourage visiting and touch. • Keep the parents informed. • Involve them in simple care tasks.	• Considered met when the parents are involved.
