17.11 Rheumatic Fever*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • Child says, "My knees and ankles hurt." **Objective** • Arthritis moving from joint to joint • Raised ASO titer	**ACTUAL** Acute pain related to joint inflammation as evidenced by painful, swollen joints.	• Pain relieved within 48 hours.	• Give the prescribed anti-inflammatory drug. • Support the joints with pillows. • Bed rest in the acute phase.	• Considered met when pain is relieved.
Subjective • Child says, "I get tired quickly." **Objective** • Tachycardia • New murmur	**ACTUAL** Decreased activity tolerance related to carditis as evidenced by tachycardia on minimal activity.	• Joins in activities within his limits.	• Make sure he gets the prescribed rest. • Offer quiet play. • Check HR.	• Goal reached when activity is tolerated.
Subjective *No specific complaint* **Objective** • Long-term prophylaxis • One injection missed	**RISK** Risk for decreased cardiac output as evidenced by risk factors: recurrent rheumatic fever with progressive valvular damage.	• Prophylaxis given on time, without recurrence.	• Teach the parents why every dose counts. • Give them a schedule card. • Arrange cardiac follow-up.	• Met when doses are on schedule.
