17.15 Thalassemia Major in Children*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • Mother says, "She gets tired and pale before her transfusion." **Objective** • Hb 7 g/dL • Pale • Enlarged spleen	**ACTUAL** Decreased activity tolerance related to chronic anemia as evidenced by fatigue and low hemoglobin.	• Keeps up her usual activity after transfusion.	• Give the transfusion as prescribed, with safety checks. • Watch for reactions. • Plan rest.	• Met when activity is maintained.
Subjective • Mother says, "The chelation pump is hard to use every night." **Objective** • Ferritin raised • Doses missed	**ACTUAL** Ineffective health self-management related to the burden of chelation therapy as evidenced by missed doses and elevated ferritin.	• Chelation given regularly.	• Discuss oral chelation with the team. • Teach and support the family.	• Achieved as adherence improves.
Subjective *No specific complaint* **Objective** • Splenectomy • Repeated transfusions	**RISK** Risk for infection as evidenced by risk factors: splenectomy and repeated transfusions.	• No serious infection.	• Make sure vaccinations are complete. • Teach the parents to report fever urgently.	• Outcome reached if no infection develops.
