19.2 Family Health Assessment*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • Mother says, "Since my husband lost his job, we argue all the time." **Objective** • Money worries • Children doing worse at school	**ACTUAL** Disrupted family interaction patterns related to unemployment and financial stress as evidenced by frequent conflict and changes in children's behavior.	• Family agree a shared plan for managing stress.	• Carry out a family assessment using a genogram and ecomap. • Encourage open communication within the family. • Refer to social support services. • Follow up as agreed.	• Achieved when a shared plan is agreed.
Subjective • "We eat fast food most days." **Objective** • Two family members overweight • Little physical activity	**ACTUAL** Ineffective family health management related to limited knowledge of healthy lifestyles as evidenced by poor diet and inactivity.	• Family agree two healthy changes.	• Teach balanced meals using local foods. • Encourage physical activity the family can do together. • Set small, achievable goals.	• Outcome reached once the changes are agreed.
Subjective *No specific complaint* **Objective** • Diabetes and hypertension in the family • Never screened	**RISK** Risk for ineffective blood glucose pattern self-management as evidenced by risk factors: family history of diabetes, overweight, physical inactivity and absence of screening.	• Adults in the family are screened within 1 month.	• Arrange BP and glucose screening for the adults. • Teach the early signs of disease.	• Considered met when screening is completed.
