2.5 Immobility*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I cannot move my legs well." **Objective** • Reduced range of movement in both legs • Needs help to turn in bed • Muscle power 3/5	**ACTUAL** Impaired physical mobility related to neuromuscular impairment as evidenced by reduced ROM and inability to turn independently.	• Joint range preserved and assisted mobility achieved within 1 week.	• Test muscle power and ROM each day. • Carry out passive or active ROM exercises three times daily. • Turn two-hourly, supporting him with pillows. • Agree a mobility plan with the physiotherapist. • Supply assistive devices where they help.	• Achieved: no contractures and mobility improving.
Subjective • "I need help to wash." **Objective** • Cannot reach his lower body • Needs assistance with bathing	**ACTUAL** Decreased bathing abilities related to impaired mobility as evidenced by inability to wash body parts.	• Takes part in his own bath as far as he can within 3 days.	• Assess how much he can do unaided. • Place soap, towel and basin within reach. • Let him do what he can; assist with the rest. • Keep him covered and protect his privacy.	• Achieved if he washes his face, arms and chest himself.
Subjective • Calves feel heavy **Objective** • Bed rest for more than 3 days • Aged 68 • Recent surgery	**RISK** Risk for thrombosis as evidenced by risk factors: immobility, advanced age and recent surgery.	• No DVT: calves free of pain, swelling and redness.	• Examine both calves daily for pain, swelling and warmth. • Encourage hourly ankle pumps while awake. • Fit compression stockings or devices if ordered. • Give prophylactic anticoagulation as prescribed. • Keep him well hydrated.	• Outcome reached if no signs of DVT appear during the stay. • One-sided leg swelling or sudden breathlessness requires immediate review.
