4.13 Coronary Artery Bypass Graft (CABG)*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • Rates sternal pain 7/10 **Objective** • Guarding • Shallow breathing	**ACTUAL** Acute pain related to sternotomy as evidenced by pain score and shallow breathing.	• Pain at or below 3/10 with an effective cough.	• Give analgesia regularly. • Teach him to hug a pillow to the chest when coughing. • Encourage deep breathing and incentive spirometry.	• Outcome reached when pain is controlled.
Subjective *No specific complaint* **Objective** • Chest drains in place • Hypotension after surgery • Low urine output	**ACTUAL** Ineffective peripheral tissue perfusion related to post-operative myocardial depression as evidenced by hypotension and reduced urine output.	• MAP on target; urine at least 0.5 mL/kg/hour.	• Follow hemodynamics, ECG and chest drain output. • Give fluids and inotropes as prescribed. • Follow potassium.	• Considered met when hemodynamics are stable.
Subjective *No specific complaint* **Objective** • Sternal and leg wounds • Diabetes mellitus	**RISK** Risk for surgical wound infection as evidenced by risk factors: sternotomy, graft harvest site and diabetes.	• Wounds heal without infection.	• Keep glucose within the ordered range. • Inspect wounds daily. • Teach sternal precautions: no heavy lifting, no pushing up with the arms.	• Goal reached as the wounds heal.
